Ak si vymažem usera tak nestačí keď si urobím nového, lebo RID Master mu priradil jedinečný RID ktorý mu nevieme my ovplyvniť, čiže nebudeme mať všetky oprávnenia ako predtým.

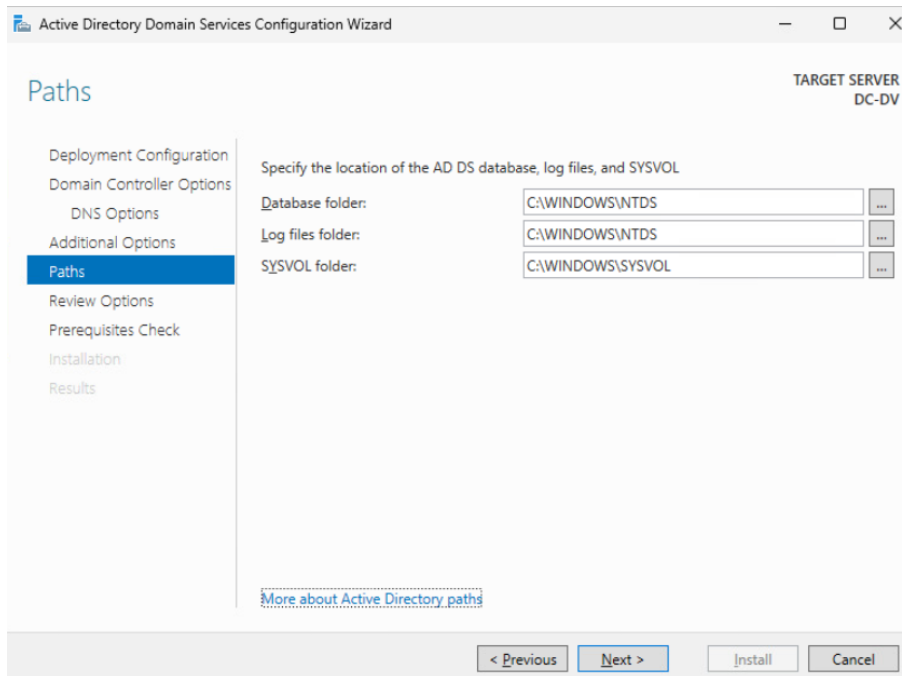

- **Do DSRM vchádzame pomocou F8 pri boote a slúž na obnovenie z DB object**
- **No GUI**
- **Restores poznáme :**
 - **Neautoritatívny restore (default)**
 - **Autoritatívny restore -> dačo že zreplikuje všetky objekty z DB na všetky ?**

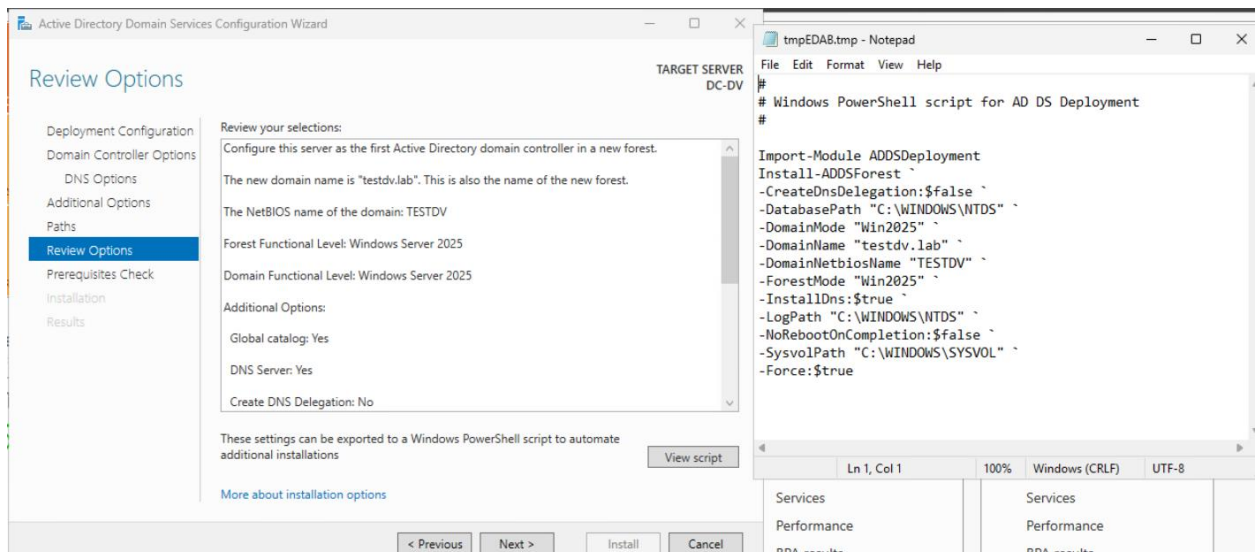

- Warning že sa nevie spojiť s doménou LAB

- Ovplyvňuje
- MAX 15 znakov
- Veľké a malé písmená, čísla, podčiarkovník [_] a pomlčka [-]

Bude v teste z mali by sme dat na samostatny disk alebo aspon volume

- Tu si vieme pozriet SCRIPT v PowerShelli na nainstalovane nasej domeny, ale chyba tam to mandatory DRSM heslo ->> museli by sme ho dopisat

⚠ A delegation for this DNS server cannot be created because the authoritative parent zone cannot be found or it does not run Windows DNS server. If you are integrating with an existing DNS infrastructure, you should manually create a delegation to this DNS server in the parent zone to ensure reliable name resolution from outside the domain "testdv.lab". Otherwise, no action is required.

ℹ Prerequisites Check Completed

✔ All prerequisite checks passed successfully. Click 'Install' to begin installation.

⚠ If you click Install, the server automatically reboots at the end of the promotion operation.

Tu vsetko fajm len ze nevie najst ten LAB

Po reboote :

2. Vytvorit Site -> SITE_TEST [192.168.X.0/24]

3. OU Structure

Objekty budu :

1. USERS
 - a. Admins
 - b. Testers / Users (je to jedno)
2. Servers
 - a. Infra [DNS, FileServre, a vsetko take]
 - b. App
3. Groups
 - a. Admins
 - b. Users / Testers (je to jedno)

Potom prihlasenie sa:

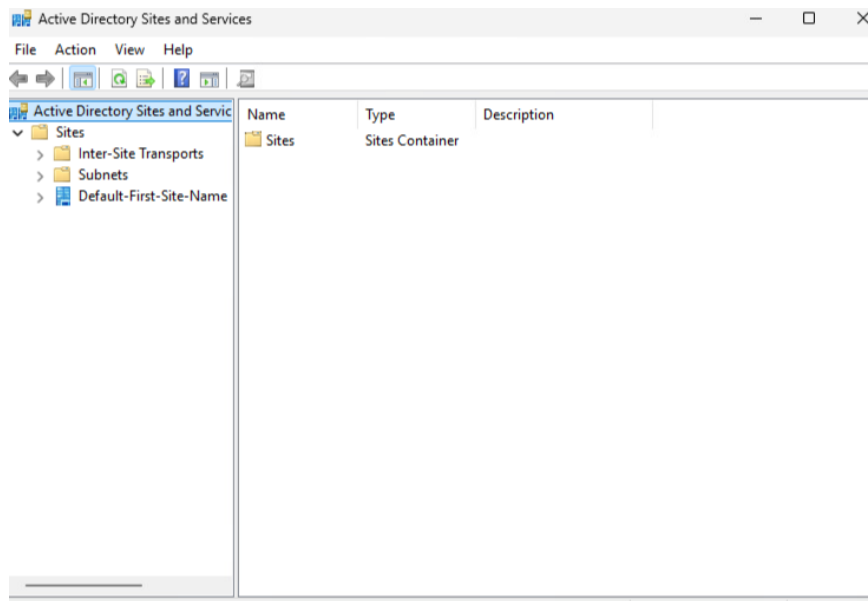

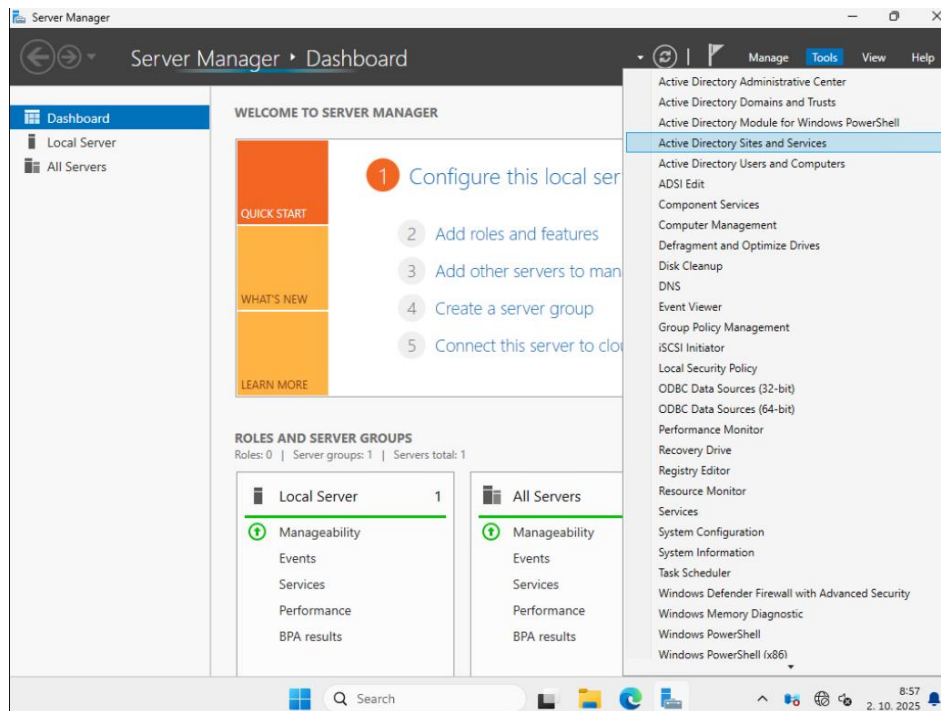

Dame Other User

.\administrator

Heslo

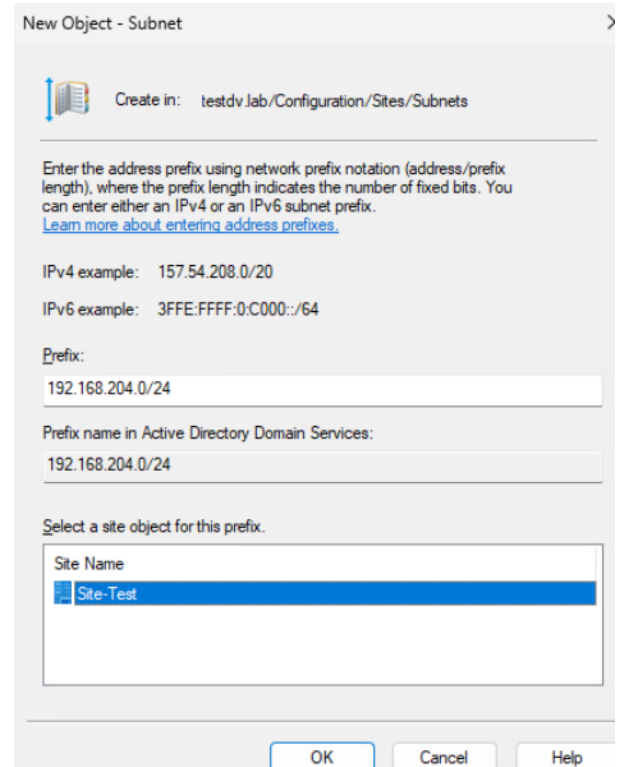

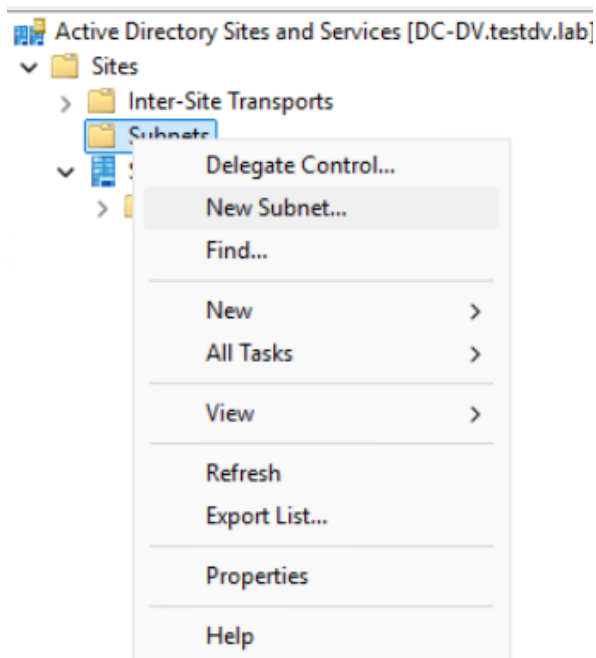

Lokalny ucet sa disabloval, neda sa prihlasit inym uctom ako domenovym a ten co sme predtym mali sa stal tym administratorskym -> stal sa z neho najsilnejši account, v malých firmach kludne moze ostat ale vo veľkých firmach to určite nechceme (SECURITY, niekto sa tam dostane a sme cooked + keď náhodou odíde z firmy tak sme tiež cooked lebo nikto mu nevie zmeniť heslo [iba druhý enterprise admin])

2. Sites -> Ideme robit Sites, to sa robi v Active Directory Sites and Services

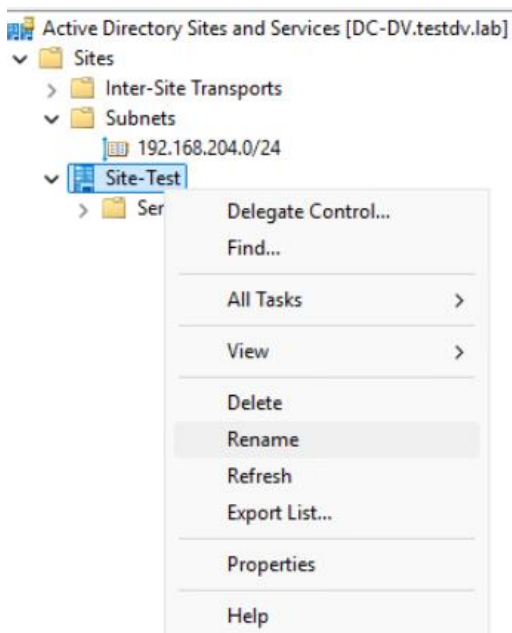

Tu vidime ze sa automaticky vytvorila defalt site, my sme si to nevyberali

Musime vytvorit novu subnet

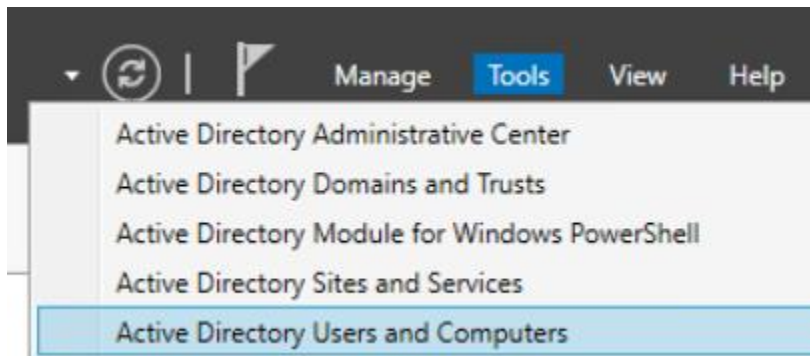

Tu si dame rename

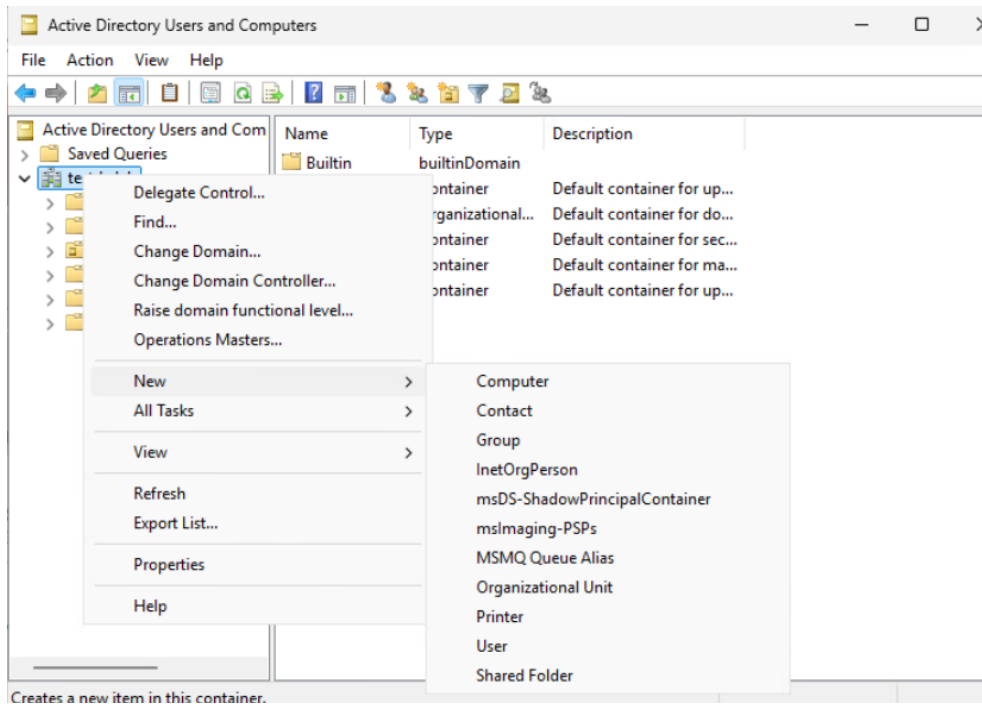

3. Vytvaranie OUčiek

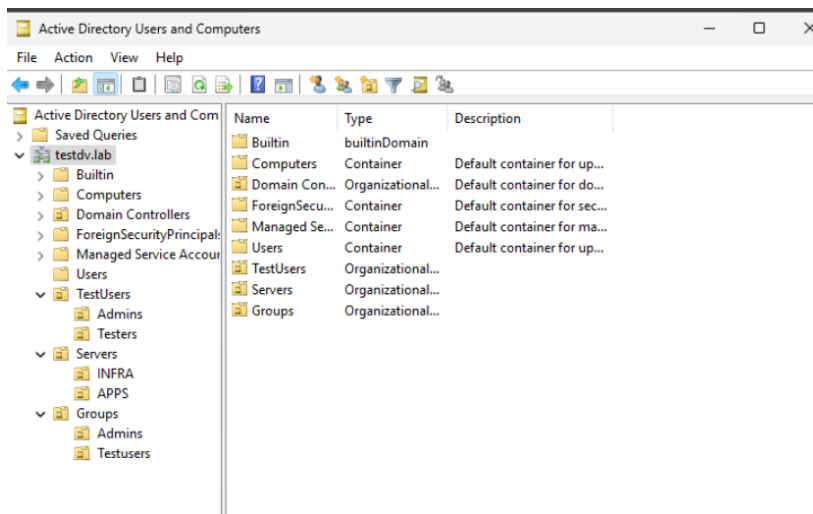

Tie sa robia tu :

Tu si urobime Organizational Units a podOrganizational Units

Vytvorene

Default OU pre Domain Controller je Domain Controllers
